PEAK ELEMENT FINDER
Description 22812 Ante and 22812 Ant
Description: You are given an N- dimensional array arr[]. A peak element in the array is defined as an element whose value is greater
than or equal to its neighboring elements (if they exist). Your task is to find the index of any peak element in the given array
than or equal to its neighboring elements (if they exist). Your task is to find the index of any peak element in the given array Note: use 0-based indexing
$\mathcal{I}_{\mathbf{K}}$
An integer representing the number of elements in the array. N space-separated integers, denoting the elements of the array. N space-separated integers ,denoting the elements of the array arr[]
The operation integers agent and define the array array
